

Linked list

1 Problem Statement

Implement a singly linked list to maintain employee records. platform perform the following operation

- 1) Insert an employee record at beginning
- 2) Insert an employee record at end
- 3) Delete an employee record using employee ID
- 4) Search for an employee using employee ID
- 5) Display all employee records.

Each employee record contains
Employee ID Name & salary

2. Objectives

- 1) To understand the concept of a singly linked list
- 2) To create & Manage employee record using nodes

- 3) To perform insertion at beginning & end
- 4) To perform deletion of an employee record
- 5) To perform searching of an employee record
- 6) to Display all record stored in the linked list.

3. Algorithm.

- 1) Start
- 2) Initialize // Head = Null
- 3) Display Menu; insert, Delete, Search, Display, Exit
- 4) perform the selected operation:
 - insert: create a node & add it at beginning / end
 - Delete: Search employee ID & Delete the matching node
 - Search: Traverse the list & find employee
 - Display: Traversal & display all employee record.
- 5) Repeat until exit is Selected
- 6) Stop
